

Earlier in the semester, we reflected on the organization that is our clients and what our clients are trying to accomplish. Now, near the end of the semester, after interacting with the clients on a regular basis, our impression of them is as positive as it was in the beginning of the semester. From our conversations and meetings with Yichen and JoJo, we are confident that they still believe in their early-semester goals of improving students' lives through their application. While the application was originally intended for use during remote classes, we have found that it will be just as useful as we return to in-person instruction. The clients always listened to new ideas and issues, putting the betterment of the application at the forefront of their consideration. This demonstrated to us that their primary goal was to make the app as useful as possible to students. The features that we add to the application will bring it one step closer to being available for students to benefit from.

The features that have been most important to the clients are the habit tracker, the achievement functionality, and the calendar. The habit tracker provides a simple interface for users to see their habits, enabling them to see what still needs to be completed. By clicking on one of these habits, the user can view that habit's details and record the completion of that habit for that day by "checking in". This is an integral part to the overall mission, as the habit tracker embodies the app's main functionality: keeping track of habits. The achievement functionality allows the app to be gamified to engage the users more. Once a certain amount of habits are achieved, the user can collect points and later redeem those points for accessories which will decorate their profile picture. The calendar page provides a monthly view, and contributes to the formation of healthy habits by allowing users to visualize their overall progress. It also includes the buffer button, a feature that was very important to the clients and allows a user to retroactively check in for a habit.
